How to Make Your Own Kite

如何自己做風箏

Do you want to fly a kite this weekend? You do not need to buy one. Follow these steps and make your own kite in thirty minutes. First, get a large sheet of paper. It should be about 60 centimeters long and 40 centimeters wide. A rectangle shape works best.

Second, draw a dot in the middle of the top edge and another dot at the bottom. Draw a straight line between the two dots. Then draw a line across the paper, about 20 centimeters from the top. Now you have four triangles on the paper. Cut along the outside lines, and you will get a diamond shape. Third, tape two thin sticks along the lines. Each stick should weigh less than 10 grams, or the kite will be too heavy to fly.

Finally, tie a string to the point where the two sticks meet. Your string should be at least 30 meters long. Walk to an open field, hold the string, and run! Your kite may fly as high as 50 meters. You cannot measure that with a ruler, so just look up and enjoy the sky.
